Dual security

Touch screen keypad lightens your unlocking with the latest technology.

You could make an instant PIN code by adding any figure before or after the valid password to avoid the password being stolen.

The android micro-USB power supply and mechanical key unlocking are always available, to avoid any inconvenience caused by battery runout or wrong electronic operations.

The anti friction latch locks the door automatically when it is closed. The deadbolt extends by lifting handle to increase security level.

If the battery power is running low, an automatic alert is activated via a red light that is displayed when unlock.

This signal is given months before the battery needs to be replaced.
